

Another Rehab Success Story

PATIENT PROFILE:

- 82 year old female, hospitalized for 6 days.
- Resident at ERCC for 57 days.
- Diagnosed with open reduction and internal fixation of ankle.
- Lived independently with her husband.

Mrs. E came to ERCC after being hospitalized with a right ankle fracture following a lawnmower accident. Upon admission to Eagle Pointe, her ankle was in a cast and she was 50% weight bearing on the right lower extremities.

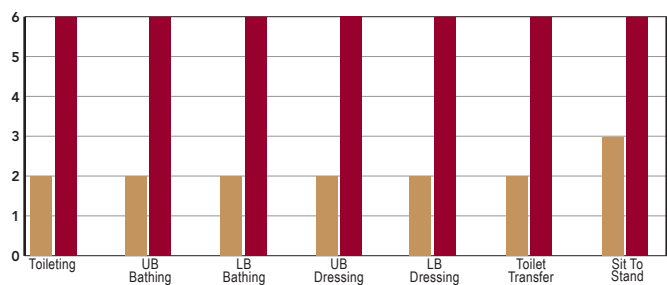

Mrs. E was evaluated by Physical Therapy (PT) and Occupational Therapy (OT) at ERCC. Her treatment focused on gait training, upper and lower extremity strengthening, activities of daily living, and adaptive equipment.

RESULTS:

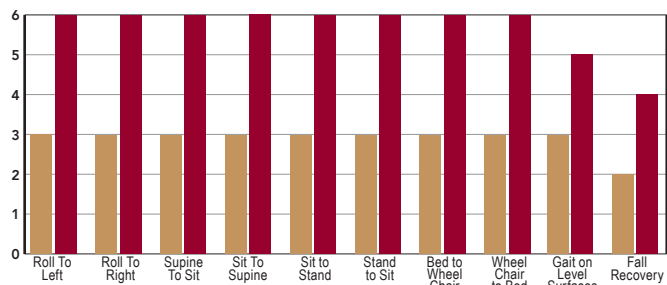

After undergoing treatment at ERCC, Mrs. E was able to negotiate stairs to enter her home, ambulate independently with a walker, complete dressing and bathing with Stand By assistance, and was independent with toileting.

THERAPY OUTCOME:

OCCUPATIONAL THERAPY:

PHYSICAL THERAPY:

Admission: ■
Discharge: ■

1 = Max Assist
2 = Mod Assist
3 = Min Assist
4 = CGA
5 = SBA
6 = Independent
